

Anchor grid: $K = 4$, $s = 8$

	0	1	2	3	4	5	6	7
0	L_0	X_0	L_1	X_1	L_2	X_2	L_3	X_3
1	Y_0	R_0	Y_1	R_1	Y_2	R_2	Y_3	R_3
2	•	•	•	•	•	•	•	•
3	•	•	•	•	•	•	•	•
4	•	•	•	•	•	•	•	•
5	•	•	•	•	•	•	•	•
6	•	•	•	•	•	•	•	•
7	•	•	•	•	•	•	•	•

Solid cells are anchors; dashed cells retain the two selector orientations.

Why the frame has one orientation

A complete anchor row: 8 vectors.
An anchor column: 7 vectors.
Their intersection: 1 vector.

$8 + 7 - 1 = 14 > 8$.

They cannot share the same factor line.
Every row–column intersection propagates the opposite orientations.

A top anchor row also suffices:
$4 + 7 - 1 = 10 > 8$.
